

Product Summary

Booking and membership software for small fitness studios in India · 1 October 2026

What FitSlot is. FitSlot is a booking and membership platform used by about 1,800 small fitness studios in India, including gyms, yoga, dance, pilates and martial arts studios. It brings the timetable, bookings, memberships, payments, attendance and member messaging into one system, with a web dashboard for owners and front-desk staff, an app for trainers, and a mobile app and public web booking page for members. It is sold per studio per month in three plans: Starter (₹1,499, up to 150 members), Growth (₹3,499, up to 500 members) and Pro (₹6,999, unlimited members and multiple locations).

Scheduling and booking. Studios build a recurring timetable, set the capacity, room and trainer for each class, and add one-off workshops and events. Members see the coming week's classes with spots left and can book or cancel in a tap from the app or the web page. When a class is full they join the waitlist, and when a spot opens the first person in line is booked automatically and notified. Cancellations close 2 hours before class, and front-desk staff can book on a member's behalf, with every booking recording where it came from.

Memberships and payments. Studios sell monthly and annual memberships, class packs and drop-in passes. Members pay online by UPI, card or net banking, memberships renew automatically with retries on failed payments, and every payment produces a GST-compliant invoice. Payment gateway events arrive through a signed webhook and are recorded once, so retries never double-process a payment.

Check-in, attendance and member messages. Members check in by scanning a QR code at the front desk, and staff or trainers mark each booking as attended or a no-show, building an attendance history per member with an optional no-show fee. FitSlot keeps members informed by push notification and email for confirmations and receipts, and on Growth and Pro sends SMS reminders 2 hours before class. Members choose which channels they receive messages on, and every message sent is logged.

Dashboard and reports. The owner dashboard shows today's classes with their bookings and attendance controls, alongside the 30-day no-show rate, member count, bookings by channel and messages sent by channel. Reports cover attendance, no-show rate, revenue by membership type and churn, and a member CRM holds profiles, notes, tags and membership status.

Trainers, marketing and platform. Trainers see their own schedule and mark attendance in the trainer app, and Pro studios can run trainer payroll at per-class or per-hour rates. Pro also adds discount codes, referral rewards and email campaigns to member segments such as "inactive for 30 days". Across all plans, role-based access separates owners, managers, front desk and trainers, while Pro adds multi-location support, a REST API and webhooks.

FitSlot is a fictional product used as the demo case for the Feature Research Agent project. Summary of the full FitSlot Product Document.
